

## Direct Capital

### Telecommunications Leasing

Leasing telecommunications equipment for your business is an excellent choice. According to industry research, approximately \$2,169,999,458 of telecommunications equipment is leased each year by businesses in the United States. These businesses lease telecommunications equipment because they know that leasing offers numerous advantages over other type of financing, including tax deductions, balance sheet management, immediate write-offs, great flexibility, customized solutions, better asset management, improved cash flow, flexible end of term options, easy upgrades, and fast processing. At Direct Capital, we have helped thousands of companies lease the telecommunications equipment they need to succeed. Let our professional, experienced team help you today!

### Telecommunications Leasing Facts

Leasing is an extremely attractive option for telecommunications equipment purchases because technology changes very quickly. With a lease, your risk of getting caught with obsolete equipment is reduced because you can build upgrades and add-ons into the lease.
